

UVS

UV STERILISER

- The first **rechargeable portable** microphone steriliser
- Equipped with microphone **UV sterilisation** and **ION deodorisation** functions.
- **Intuitive Design**

You may have extra concerns regarding sanitisation at your school, and part of this may be to take steps to clean electronics and AV equipment.

We encourage you to think about this in the context of our Flexmikes, Redmikes and Sharemikes, and other microphones you have in your school.

UV STERILISER

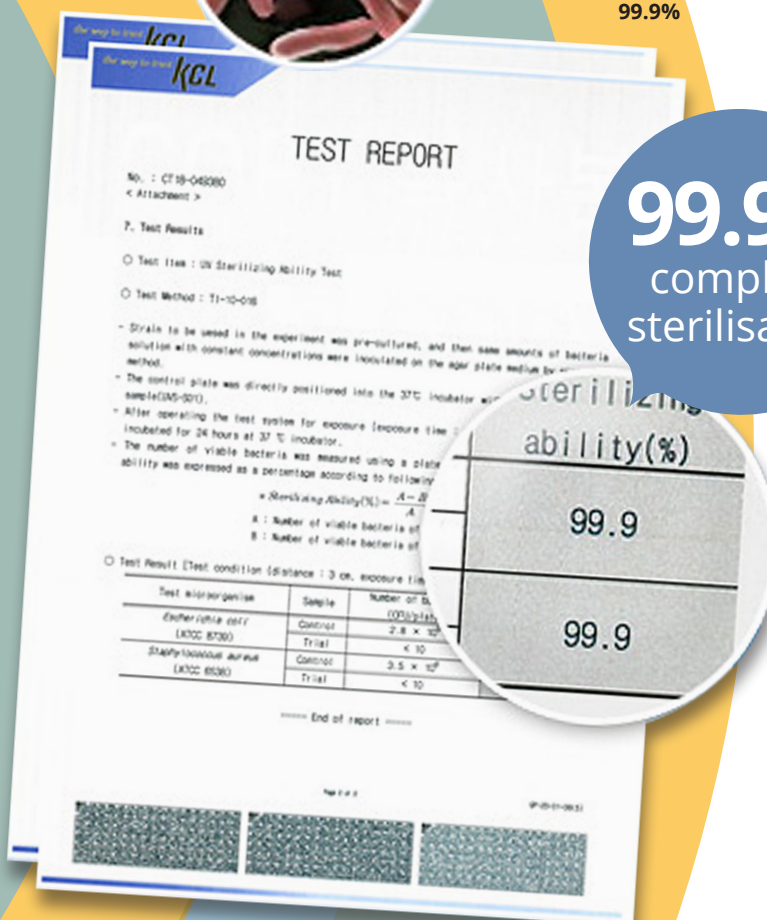

Our new **Hear and Learn** microphone sanitizer can be used with any microphone to blast it with **UV-C Ultraviolet Light (UV-C)** which can inactivate a broad spectrum of pathogenic bacteria and viruses. **UV-C** is the only way to completely obliterate harmful pathogens that are antibiotic-resistant.

Colon bacillus
99.9%

Staphylococcus aureus
99.9%

99.9%
complete
sterilisation

Test results indicate **99.9 % sanitisation**. The steriliser is rechargeable and when activated runs a full **5 minutes** over each microphone.

Interested? We suggest you order your Steriliser(s) from hearandlearn.com.au/products now. Demand is high so stock may not be available immediately. Freight times are longer at present. We will do our best to ship immediately.
