

SA College installs SoundHouse Hearing Augmentation Solutions

Hear and Learn HearAssist provides future proof technology

SOUTH AUSTRALIA'S EDUCATION DEPARTMENT IS AT THE FOREFRONT OF THE GROWING GLOBAL MOVEMENT TO BUILD SCHOOLS WITH A GREAT CONSCIOUSNESS OF OPTIMIZING LISTENING CONDITIONS FOR ALL CHILDREN.

Against new Dept rules about when and where to install Soundfield (equipment to capture voices, screen audio and other sound sources and distribute that audio evenly and gently throughout all areas of the room), Hear and Learn worked with Meinhardt Australia Pty to design, supply, install and support installation of the UConnect SoundHouse.

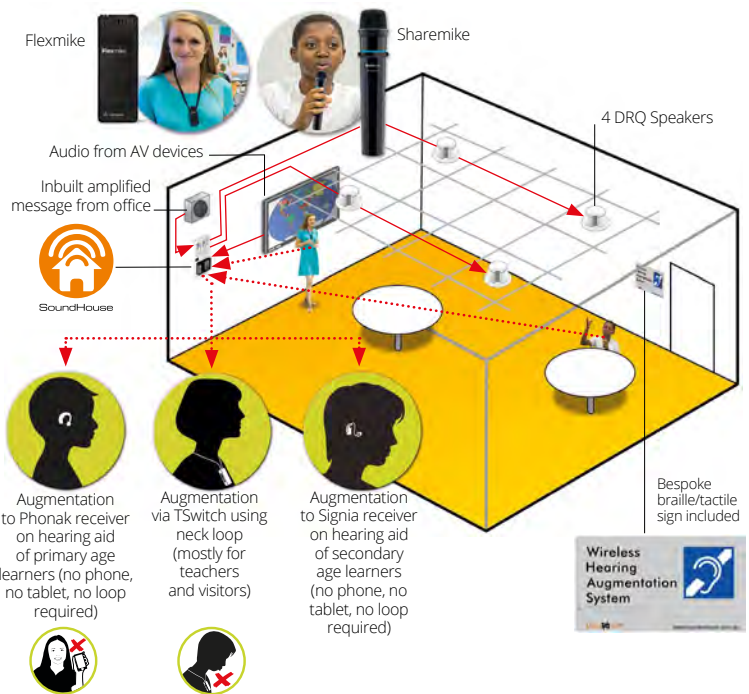

SoundHouse is a bespoke three in one solution which captures and broadcasts screen audio (no additional front wall speakers required) and captures and broadcasts voice (teacher and student) then making all of this audio (plus PA/front office messages) available for augmentation to receivers in hearing aids irrespective of brand or type.

Given the increasing redundancy of T Switch / Telecoil / Induction in the context of aids supplied to learners by the Federal Government, SoundHouse facilitates augmentation to the contemporary transmission methods built into aids of yesterday, today and tomorrow.

HearAssist

All installs of UConnect products involves HearAssist. Beyond commissioning, teachers are provided training arranged with the School, repeat visits and screen contact, and telephone / email support.
