

How Does Your Microphone Help Teachers and Learners?

OVERCOME HIGH AMBIENT NOISE LEVELS

Classroom audio systems help overcome ambient noise levels & distribute the teacher's voice at the same level throughout the classroom, **allowing students to hear the teacher regardless of where they are seated.**

INCREASE CLASS INTERACTION & PARTICIPATION¹

Students become **motivated to participate in classrooms that use a classroom audio system because they have a consistent understanding of expectations,** leading to an increase in enthusiasm & a greater desire to read aloud or give oral reports

2022 Flexmike is 28% smaller, 33% lighter & just 34g

CREATE CALMER CLASSROOMS

The use of classroom audio can reduce stress within the classroom, resulting in a **decrease on behavioural problems,** better responses to verbal correction & easier overall management & control of classrooms.

SAVES TEACHERS' VOICES²

Schools that use classroom audio systems report **8% to 13%** lower teacher absenteeism due to voice & throat problems

IMPROVE ACADEMIC TEST SCORES³

Optimising a teacher's voice can result in reading & language test score **improvements** for students at all levels.
